CH Cues

Speech therapists use a variety of cues during therapy including tactile (touch), verbal (words), and visual (visual models/mirrors) to elicit a correct sound production. Below are the most useful cues for “ch.”

Visual

1. Pretend to sneeze
2. Make a "choo choo" hand motion
3. Hit hand on palm to encourage child to say “ch” louder and/or shorter (this cue is helpful if your child says “sh” as in “sheep” for “ch.”)

Verbal

1. Say “train sound”
2. Say “sneeze sound”
3. Say “shorter” (if “ch” sounds like “sh”)
4. Say “good ‘ch’ sound”
5. Say "round lips"

Tactile

1. Gently press up behind your child's chin to raise tongue up
