# G Cues

Speech therapists use a variety of cues during therapy including tactile (touch), verbal (words), and visual (visual models/mirrors) to elicit a correct sound production. Below are the most useful cues for /g/.

## Visual

1. Open mouth wide to show how the tongue is in the back of the mouth when saying /g/
2. Place your hand on your throat to remind your child to move their tongue to the back

## Verbal

1. Say "move tongue back"
2. Say "tongue back"
3. Say "tongue up and back"

## Tactile

1. Touch your child's throat lightly to encourage him or her to move their tongue back
2. Tell your child to touch their throat while saying /g/ to "help" their tongue move to the right position
