How To Say B

Below is a brief explanation on what all the articulators (tongue, lips, teeth, jaw, breath, voice) must do to say /b/correctly.

Lips: Lips must be slightly pressed together (enough not to let air escape but not too much where it feels unnatural).

Tongue: Nothing. It is relaxed in a neutral position.

Teeth: Nothing. They are relaxed in a resting position.

Jaw: The jaw is up and centered.

Breath: /B/ is a plosive sound which means air bursts out of the mouth upon sound production.

Voice: /B/ is a voiced sound so our voice box is turned on.

Say /b/ in front of a mirror and look and feel what each muscle is doing to say the sound correctly.
