# How To Say G

Below is a brief explanation on what all the articulators (tongue, lips, teeth, jaw, breath, voice) must do to say /g/correctly.

Note: The sound /g/ and the letter G are not always the same thing. For example, the G in the name George is actually the "J" sound as in "jar."

**Lips:** Lips are slightly open

**Tongue:** The back of the tongue is pressed against the top back part of the mouth (try it and feel where your tongue is)

**Teeth:** Teeth are slightly apart in a neutral position

**Breath:** /G/ is a stop or plosive sound which means the air bursts out of the mouth upon sound production

**Voice:** /G/ is a voiced sound so your voice box is turned on.

Say /g/ in front of a mirror and look and feel what all the articulators are doing.
