# N Cues

Speech therapists use a variety of cues during therapy including tactile (touch), verbal (words), and visual (visual models/mirrors) to elicit a correct sound production. Below are the most useful cues for /n/.

## Visual

1. Get out a mirror and have your child put their tongue on the "bumpy part"
2. Model what a correct /n/ looks like and have your child copy
3. Open your mouth wide, to show where the tongue is

## Verbal

1. Say "tongue up"
2. Say "use /n/ sound"
3. Say "make nose buzz"

## Tactile

1. Touch your child's bumpy part (alveolar ridge) with a spoon or sucker to help him/her find it
2. Place a dab of peanut butter or yogurt on the bumpy part and then have him/her find it with their tongue
